## PREFACE

This publication is a summary on the marketing of the 2004 United States Pecan Crop. The information contained in this report was compiled from market reports issued by Federal-State Market News offices operated by the U.S. Department of Agriculture, Agricultural Marketing Service, and the respective State Departments of Agriculture. The following individuals contributed narratives found in this publication: Robert J. Corwin, USDA, Thomasville, GA; Diana Landry, Louisiana Department of Agriculture, Baton Rouge, LA; Mike Schulte, Oklahoma Department of Agriculture, Oklahoma City, OK; John Stacy, Texas Department of Agriculture, Austin, TX; Steve Skuba, USDA, Phoenix, AZ.

We gratefully acknowledge the information provided by the Foreign Agricultural Service and the Agricultural Statistics Service of the U.S. Department of Agriculture. We also wish to thank the growers, buyers, shellers, and other segments of the pecan industry for their cooperation in supplying information that made these reports possible.

Additional copies of this summary may be obtained at the cost of \$20.00 each on request from:

## MARKETING GEORGIA PECANS - 2004 CROP

**PRODUCTION:** According to the Georgia Agricultural Statistics Service of the United States Department of Agriculture, Georgia's final 2004 pecan production totaled 45 million pounds, measurably below the 2003 total of 75 million pounds. Georgia produced approximately 24.2 percent of the national pecan crop (185.8 million pounds) in 2004. In 2003, Georgia accounted for approximately 26.5 percent of the national production and 26 percent in 2002. Prices received by Georgia growers for 2004 pecans averaged \$1.73 per pound compared to 92.8 cents per pound in 2003. Value of the 2004 pecan crop totaled approximately \$78 million compared to approximately \$69.6 million in 2003.

**GROWING CONDITIONS:** The crop was expected to be smaller than the 2003 crop due this being the low year of the alternate bearing cycle. However, a succession of late summer Hurricanes/Tropical Storms (Frances, Ivan and Jeanne) came through the production district causing widespread but varied damage to trees and significant dropping of nuts due to the combination of high wind and rain.

The initial harvest of 2004 crop pecans began towards the end of September in scattered areas of South Georgia on the Pawnee variety. Beginning in early October the gathering of a few additional early maturing nuts of Moneymaker and Seedling varieties was noted. The limited harvest that occurred did so primarily in well managed orchards on irrigated acreage. Harvest activities during early October remained slower than last year with growers continuing to work to clean the orchards from the effects of Tropical Storm Jeanne. That storm and prior storms Frances, to a greater extent, and Ivan, to a lesser extent, caused significant damage to orchards in both South and Middle Georgia. Many orchards suffered loss of nut-bearing branches due to the effects of these storms. In some cases, whole trees were lost. This is expected to have some effect on crops of future years. This year's crop was most affected by the significant number of nuts which were prematurely blown from trees by these storms. Although a small amount of nuts were salvaged, most affected were lost as they were too immature to be utilized.

Harvesting activities remained very light into middle October. By that time a few additional early maturing varieties were noted and included Creek, Elliot and Moneymaker along with very few deliveries of Desirables. A number of rain events in mid October combined with the effects of the various September hurricanes/tropical storms continued to slow the pace of harvest activities. In the latter half of October, harvest activities accelerated although deliveries remain light, particularly for Stuarts. Accumulation points reported only very light amounts of nuts from yard trees with a wide range in quality noted. This pattern of much lighter than normal deliveries from yard trees remained in effect for the remainder of the season. As the month drew to a close, a number of foggy mornings, which slowed the drying process, were reported. A larger percentage than usual of October deliveries came from South Georgia with less from Middle Georgia.

Deliveries remained light into early November with most being of the Desirable variety and blends primarily mixtures of Desirable, Schley and Stuart varieties. Availability of Stuart variety outside blends was very limited. Aided by cooler and drier weather, harvest activities in both South and Middle Georgia accelerated as the second week of November began. However, the pace of deliveries continued to be behind recent years due to the above mentioned negative factors. By mid November, many growers reported their harvest near 50% complete, while a few growers primarily in Middle Georgia were just beginning to harvest. During this early-mid November period availability of deliveries of strictly Stuarts briefly increased. However, within a few days after the middle of the month, most reported deliveries were in the form of machine harvested blends with deliveries of lots of over 20,000 pounds of a single variety insufficient to establish market prices. This condition remained in effect for the remainder of the season with deliveries of these larger sized lots being too few in number to establish market prices on many days. As November closed, trade sources reported only very light volume coming from orchards being harvested for a second time with the overall availability of nuts during the month being below seasonable expectations. At this time, the harvest was reported as over 80% complete in South Georgia and over 60% complete in Middle Georgia according to trade sources with fairly light deliveries primarily of machine harvested blends.

## **MARKETING GEORGIA PECANS - 2004 CROP**

### **GROWING CONDITIONS: (continued)**

By early December the overall harvest activity started to decline slowed further by rain. Deliveries in early and mid December were light continuing to be mostly in the form of machine harvested blends. By the end of the first week of the month, trade sources reported the harvest over 80% completed statewide with South Georgia over 90% complete. After the periods of rain early in the month, conditions for a few days became favorable for field work. Another period of rain interrupted field work during the second week of the month. Due to the combination of rain mixed with warm, humid days, some lots were in need of additional drying at cleaning plants. In spite of the weather conditions, overall nut quality did not deteriorate as quickly as might have been expected. By mid month, harvest in South Georgia was over 90% completed and over 80% completed in Middle Georgia with most availability in the form of machine harvested blends. Deliveries (overall light) were generally very light for lots of strictly a single variety, those few mostly of 20,000 pounds or less. Harvest activity for remaining nuts was aided by dry, cool, and then cold weather during the third week of the month. Some decrease in meat yield due to rot was noted at this time. Statewide, harvest was over 90% complete with many growers now finished for the season. Deliveries in the last week of the month were very light slowed by the Christmas holiday period in conjunction with some rain. Meat yield of remaining nuts were adversely affected by continued damp, foggy mornings combined with unseasonably warm temperatures after the Christmas holiday that lasted into early January, 2005. By the end of the first week in January, the harvest was near completion, although a few growers continued to harvest very light amounts of nuts later into the month.

**MARKETING:** The first significant grower price report on Georgia pecans was issued on October 21 when bids and subsequent purchases were noted on giftpack quality pecans destined to retail outlets. The reduced crop for a low year of the alternate bearing cycle caused prices to be higher than even traditionally high prices. On average, demand was good to very good for the majority of the season fueled by several bullish factors. First, a significant number of pecans in Georgia were lost to the Septembers storms (outlined above). Second, there were only relatively limited holdovers of pecans in storage from the 2003 crop. Finally, other production areas harvested less than originally estimated fueling a strong demand and in some cases escalating prices into January, 2005. The commercial shelling industry tried to remain withdrawn from the richly priced market, but by early November, had to start drawing on some of this product. Long-time trade members described price levels reached, and for the most part maintained, as the highest they could remember for a Georgia pecan season.

Prices for yard tree lots for Seedlings started the season between 75-90 cents per pound but finished up in December selling between 95 cents and \$1.05 per pound. Prices for yard tree lots of Stuarts remained between \$1.20-1.25 per pound for the season. Desirables for lots of good quality and larger volume (over 20,000 pounds) saw prices range between \$1.90-2.16 per pound over the season. Smaller (less than 20,000 pounds) lots of good quality brought between \$1.80-2.12 per pound over the course of the season. Stuart, for lots of good quality and larger volume, had prices range between \$1.60-1.84 per pound over the course of the season while smaller lots of good quality ranged between \$1.57-1.87 over the season. Some of the highest prices for the smaller sized lots occurred later in the season when larger sized lots were barely, if at all, available.

Prices for machine harvested blends (lots containing a mixture of two or more varieties) of good quality in large lots (20,000 pounds or more) sold in a range of \$3.40-\$3.85 per point but mostly \$3.55-3.80 per point during the peak of the harvest. In latter November and for the remainder of the season, blends were primarily available in smaller (less than 20,000 pound) lots. Over that period, prices rose even higher finishing the last several weeks of the season in a range of \$3.80-4.15 per point. "Blends" were primary purchased on a meat yield-meat cost basis, dollars per percentage point of edible kernel.

Robert J. Corwin, Local Representative, Thomasville, Georgia

## MARKETING LOUISIANA PECANS – 2004 CROP

**PRODUCTION:** According to the Louisiana Agricultural Statistics Service, the 2004 Louisiana Pecan crop totaled 9 million pounds, which is 11 million pounds less than the 2003 crop and 3 million pounds more than the 2002 pecan crop. Native pecans in 2004 comprised approximately 72 percent of the total compared with 80 percent in 2003. Improved varieties were about 28 percent of the total in 2004 and approximately 20 percent for 2003. The average price received by producers for the 2004 crop was \$1.08 per pound, compared to the 2003 average of 76.0 cents per pound. The overall value of the 2004 crop totaled 9.7 million dollars, which is lower than the 2003 average of 15.2 million dollars.

**GROWING CONDITIONS AND HARVEST:** The initial harvest of the Louisiana Pecan crop began in early October in mostly the south and central areas of the state. Deliveries by growers started slowly with good demand. On October 1, the Louisiana Agricultural Statistics Service estimated the statewide harvest at 1 percent complete which compares to 1 percent in 2003. On November 3, pecan harvest was reported at 37 percent and by December 7 the harvest was 80 percent complete.

**MARKETING:** In mid-October, when prices were first reported, demand was good but supplies were light. Initially reported prices paid to growers for Native Pecans in lots less than 5,000 pounds of good quality ranged from 70-75 cents per pound and in lots over 10,000 pounds 95 cents per pound. For the majority of the season, lots less than 5,000 pounds ranged between 80-90 cents per pound. Lots of over 10,000 pounds rose from 95 cents to \$1.10 per pound in October into November. After that time, the reported price fell to 85 cents per pound remaining at that level until the end of the season.

## MARKETING OKLAHOMA PECANS - 2004 CROP

**PRODUCTION:** The 2004 crop in Oklahoma was estimated by Oklahoma Agricultural Statistics at 28 million pounds as compared with 6 million pounds for 2003 and 10 million pounds for 2001.

**GROWING CONDITIONS AND HARVEST:** Weather conditions in Oklahoma were favorable for the 2004 crop. Temperatures were mild during the summer and fall seasons with more than adequate moisture available. Early harvested quality was good with most lots showing a high quality shell. Delivered quality of Natives and Seedlings was consistent for the season with a high quality noted ranging from a 40-44 per cent meat yield. Scattered precipitation fell during the season but overall the harvesting conditions were generally good. Harvesting began during the middle of November in most areas of the state. Harvesting continued to be active in December and trade sources estimated harvest at 75-80 percent completed by January 15.

**MARKETING:** The first grower price report on Oklahoma Pecans was issued on November 30. Lots in excess of 20,000 pounds, mostly truckloads lots of 40,000 pounds, were sold on an inshell dollars per point basis, while smaller lots were generally sold inshell cents per pound or seller's choice. For most of the season, Natives and Seedlings in lots less than 1,000 pounds (yard tree lots) sold in a range of \$2.00-\$2.50 per point after starting the season as high as \$2.90 per point. Graded lots of Natives and Seedlings in excess of 1,000 lbs. with a 40 percent meat yield or better mostly 40-44% meat yield sold as low as \$3.00 per point early in the season and as high as \$3.60 per point later in the season. For the entire reporting period, lots of Stuarts remained at \$3.60 per point. The abundant 2004 Oklahoma crop benefited its producers with very high prices due to smaller than expected crops in other areas of the nation.

**MARKETING TEXAS PECANS – 2004 CROP**  
**NORTH, CENTRAL, SOUTHERN and WESTERN AREAS**

**PRODUCTION:** The Texas Agriculture Statistics Service estimated the 2004 Texas pecan crop at 40 million pounds, significantly lower than the 2003 crop total of 70 million pounds, and basically the same as the 40 million pound crop of 2002. Prices received by growers throughout the United States for 2004 averaged \$1.76 per pound a significant increase over the 98.4 cents average for 2003. Prices received by growers in Texas for 2004 pecans averaged \$1.67 per pound almost 76 cents higher than the 91.2 cents average for 2003.

**GROWING CONDITIONS:** Following a heavy crop in 2003, trees came into the 2004 production year in excellent condition after a wet fall and mild winter in Central and South Texas in 2003. And then the rains came. A wet spring produced a good bud break in mid-March in areas south of Austin. Nut set was below average in Central, South and West Texas. The scab caused by the early rains and a short drought in the middle of the growing season also hurt production.

**HARVEST:** The beginning of the 2004 harvest started in early October. Rain throughout the season slowed harvest all across the state. South Texas lost a lot of nuts due to heavy flooding. Others lost nuts due to wet orchards. The improved varieties in Central and South Texas including Pawnee, Cheyenne, Desirable, Wichita, and Mohawk were still being harvested into early December. The harvest in West Texas began about the first of December and was slowed by unusually wet orchards. Crop maturity came early compared to previous years, probably due to early rain and being an off year. Early maturity, in the improved varieties, and wet weather pushed Native harvest well into December in Central Texas, which caused significant losses due to wildlife consumption. The 2004 harvest was officially over February 1<sup>st</sup>.

**QUALITY:** The 2004 production year produced a below average nut crop. Overall, the quality of the 2004 nut crop was considered average. A wet spring and fall in North, Central and South Texas, had some effect on quality with some lots showing embryo rot and sprouting. West Texas had a below average year for both quality and quantity.

## **MARKETING TEXAS PECANS – 2004 CROP**

**MARKETING:** The first marketing report of the 2004 pecan season was released on October 21, 2004. The final report was issued on December 21, 2004. Prices for Native/Seedlings and improved varieties were higher than 2003 due to a smaller crop than expected in other states. Demand was considered good throughout the 2004 marketing season. Opening price levels offered for Natives in small volume lots ranged from 75 cents to \$1.10 per pound in early November with most of these lots showing good quality and displaying 42% to 44% meat yield. A lot of Natives were lost to wet weather and wildlife consumption due to the heavy rains late in the season. Prices rose throughout the season to a high of \$1.15 in late December. Improved varieties traded at different levels based on variety and quality. The Pawnee variety averaged \$1.85 per pound with a high of \$2.00 early in the season and holding steady throughout the season with little variation for quality. Harvest of the Wichita variety began in mid-October and averaged \$1.95 per pound with a low of \$1.70 early and a high of \$2.00, which held through the harvest. The prices offered were for pecans with a meat yield of 52% or better. Buying interest remained high throughout the year for inshell and shelling purposes. Prices remained at or near historically all-time high prices for the vast majority of the season due to strong demand coupled with short crops in Texas as well as several other competing domestic growing areas.

John Stacy, Market News, Austin, Texas

**MARKETING WESTERN IRRIGATED REGION (ARIZONA AND NEW MEXICO)**  
**PECANS - 2004 CROP**

**PRODUCTION:** The 2004 crop in New Mexico was estimated by the New Mexico Agricultural Statistics Service at 39 million pounds as compared with 55 million pounds for 2003 and 36 million pounds for 2002. New Mexico accounted for 21 percent of the nation's total production and 28 percent of the nation's improved variety production above the 19.5 percent of nation's total production accounted for in 2003 by New Mexico and the 27 percent of the nation's 2003 improved variety production. Average price paid per pound was \$2.28 as compared with \$1.28 per pound in 2003 and \$1.25 per pound in 2002. Value of production was estimated at \$88.9 million for 2004 above the \$70.4 million for 2003 and well above the \$45 million in 2002.

Arizona production was estimated at 14 million pounds for 2004 compared with 22.5 million for 2003 and 16 million pounds for 2002. Arizona produced 7.5 percent of the nation's total production and 10 percent of the nation's improved variety production in 2004. This was slightly below 2003 when Arizona accounted for 8 percent of the nation's production of all varieties and 11 percent of the improved varieties. Average price paid per pound was \$1.85 for 2004 well above the \$1.04 averaged in 2003 and the \$1.03 averaged in 2002. Value of production was estimated at \$25.9 million as compared with \$23.4 million in 2003 and \$16.48 million in 2002.

**GROWING CONDITIONS AND HARVEST:** As a result of near normal temperatures and of frequent rainfall during the growing period of August to November that increased natural nitrogen to the soil, cleaned the leaves and caused a higher humidity, while lowering mean temperature to near ideal growing temperatures, the harvested quality was very good for the 2004 season. Trade sources also attributed the fine quality to the shorter than normal bearing crop. Delivered quality generally averaged 56 percent meat yield or better for large lots in excess of 20,000 pounds and 52 per cent meat yield or better for small lots less than 5,000 pounds for most of the season. Harvesting generally began the last week of November or first week of December depending upon the area when low temperatures dipped into the 20s for several nights in the higher elevations and the 30s in the lower elevations. A few growers harvested earlier mostly for gift pack trade using drying facilities to lower moisture content to acceptable levels. Harvesting was slowed by frequent precipitation the first half of December with harvest activity varied by soil type and location. Some growers used various methods to dry orchard floors such as harvesting orchard edges, air drying centers and harvesting the centers to allow orchard floors to dry outward. Weather conditions improved later in December to allow active harvesting in most areas. Growers early in the season were reluctant to market harvested supplies but rather accumulated supplies allowing for nuts to dry to acceptable moisture levels. Trade sources estimated harvesting 70 percent or more complete depending upon the area by January 11 and 90 per cent complete by January 20. Much of the remaining acreage afterward was on small twenty acre blocks that were waiting custom harvesting. The remaining harvesting was slowed by rain in the middle of January but was generally completed by the middle of February.

**MARKETING:** Lots in excess of 20,000 pounds, mostly truckloads lots of 40,000 pounds, were sold on an inshell dollars per point basis while smaller lots were generally sold inshell cents per pound or sellers choice. The Western Schley was the prevalent improved variety marketed. The first reported prices for lots in excess of 20,000 pounds were on December 2 when lots of 55 percent or better meat yield quality were sold at \$3.70-3.85 per point. Prices rose slightly by December 7 to \$3.80-4.00 per point and to \$4.00 per point by December 9. On December 28 prices were reported slightly higher at \$4.00-4.05 per point mostly \$4.00 per point for 56 per cent or better meat yield quality and on December 30 prices reported were \$4.00-\$4.10 per point mostly \$4.00-4.05 per point. Prices rose again to \$4.00-4.15 per point mostly \$4.15 per point January 11. Prices decreased January 20 to \$4.00-4.10 per point mostly \$4.00 per point and January 27 the last day of reported prices to \$3.80-4.00 per point.

Prices for small lots of 5000 pounds or less were first reported December 2 when lots of 52 percent meat yield or better were sold at \$1.40-1.60 per pound. The market rose to \$1.50-1.80 per pound by December 9 then to \$1.50-1.90 per pound December 16. The market was higher December 28 when prices were reported at \$1.50-2.00 and remained at that level until January 20 when prices were reported slightly lower at \$1.50-2.00 per pound mostly \$1.50-1.80 pound.
